PROFESSIONAL SUMMARY

Software Engineering undergraduate with hands-on experience in backend and full-stack web application development using ASP.NET Core, REST APIs, MongoDB, SQL, and React.js. Skilled in designing scalable backend architectures, implementing authentication systems, API integration, database management, and responsive web applications. Passionate about building efficient, maintainable systems and continuously improving software engineering skills.

EDUCATION

Bachelor of Software Engineering — Bahria University, Karachi Campus

Expected Graduation 2027

TECHNICAL SKILLS

Backend: ASP.NET Core Web API, REST APIs, JWT Authentication, MVC

Databases: MongoDB Atlas, SQL Server (SSMS), MySQL

Frontend: React.js, HTML, CSS, Bootstrap, Tailwind CSS

Languages: C#, Java, Python, JavaScript, SQL

Tools & DevOps: Git, GitHub, Postman, Vercel, Visual Studio, VS Code

Concepts: OOP, API Integration, Role-Based Authentication, CRUD Operations, Layered Architecture

PROJECTS

Event Management & Ticketing System

ASP.NET Core Web API • React.js • MongoDB Atlas • JWT • Postman • Vercel / Azure

- Led development of a cloud-based Event Ticketing & Planning platform using ASP.NET Core, React.js, and MongoDB with scalable clean architecture and RESTful APIs.
- Implemented JWT authentication, role-based access control, real-time ticket reservation, QR-based digital ticketing, and optimized MongoDB data management with indexing and auto-expiry reservations.
- Coordinated backend development, API testing with Postman, and frontend-backend integration as team lead while managing core booking and event management modules.

Pharmacy Management System

C# • ASP.NET MVC • SQL Server • Bootstrap

- Developed a POS system with inventory management, sales tracking, and CRUD operations.
- Implemented user authentication, session management, and role-based access for staff.

Banking Management System

Java • MySQL • Swing (GUI)

- Built a GUI-based desktop application using OOP principles for account and transaction management.
- Designed relational database schema and integrated JDBC for persistent data storage.

Music Player Application

C# • Windows Forms • SQL Server

- Built a desktop media player implementing data structures (queues, linked lists) with SQL-backed playlist persistence.

Smart Medicine Recommendation System

Python • Machine Learning • Google Colab

- Developed an ML-based system for disease prediction and medicine recommendations using classification models.

COURSES

- Introduction to HTML, CSS, and JavaScript
- Java Programming
- SQL for Data Analysis
- Video & Photo Editing
